Whether you're feeling the need to stretch things a bit wider or taking away a bit of gray with the pencil tool, you can see immediately how your editing affects your image. If you're Photoshop savvy, you can take your image editing to a new level of "cuteness" by making the image watercolor-like. This trick is achieved by using the 'grayscale' command in the layer palette. This command enables you to create a layer, apply a grayscale filter, and then have that layer blend with the image on top of it. Try it! \* \* \* ## Using Photoshop in Creative Ways When you open Photoshop, you see a ton of different things, including several panels and buttons. Some of these tools are pretty utilitarian — things like Filters, Layers, Effects, Layer Styles, and so on. However, some of them enable you to work in new and creative ways. Lactic acid as a prebiotic in faecal microbiomes and the cecum of rats: a short-term study. Gut microbiota is a key player in the health of an individual. Lactic acid bacteria are often found in the gastro-intestinal tract but do not normally proliferate. Lactic acid is a component of dietary fibre and it is known to stimulate the growth of lactobacilli in food matrices. The present study was designed to investigate the effects of lactic acid on the faecal microbiota of rats. Thirty SD rats were divided into three groups. The first was left untreated (control group). The second and third received 2 g lactic acid in 200 ml drinking water and 0.5 g lactic acid in 50 ml drinking water, respectively. Faecal samples were collected on days 0, 4 and 12 and the number of faecal bacteria, bifidobacteria and lactobacilli were enumerated by culture. The viable counts of bifidobacteria and lactobacilli showed a tendency to increase during the 12-day study. Lactic acid is a prebiotic which is associated with increased numbers of lactobacilli and bifidobacteria in the faeces of rats. package proxy import ( "fmt" "io" "io/ioutil" "net/http" "net/http/httptest" "net/urld" "os" "testing" ) // TestSkipAuth does a request that uses the authorization header // and then skips the authorization, so that the authorization header is // returned by the next request. func TestSkipAuth( "testing.T" { var output []byte server := httptest.NewServer(http.HandlerFunc(func(w http.ResponseWriter, r \*http.Request) { if r.URL.Path == "/favicon.ico" { // Only allow request for "/favicon.ico" w.Header().Set("Content-Type", "text/plain; charset=utf-8") w.WriteHeader(http.StatusNotModified) return } // Attempt to authenticate u :=

## What's New in the Adobe Photoshop CC?

Q: GNU-make: Capture the exit code of sub-make I have a makefile in which I have a variable called status: STATUS = always\_good that has to be set to 1 if the make fails. The makefile is rather involved and needs to return to the calling file if and only if the child makes fails. Obviously, there are all kinds of other reasons why a make could fail, including the lack of memory. Since that exit value is rather abstract, I'd like to capture it in the parent make. So I tried: export MAKE="make" include my\_makefile\_dir/all : \$(STATUS) debug : \$(STATUS) \$(STATUS) : fail @exit 1 success : \$(MAKE) -f \$(my\_makefile\_dir)/Makefile fail: \$(MAKE) -f \$(my\_makefile\_dir)/Makefile @exit \$(STATUS) The failing build gives .PHONY: all debug success fail all: @: @\$(MAKE) -f \$(my\_makefile\_dir)/Makefile @: # Make rule for all. .PHONY: debug debug: @\$(MAKE) -f \$(my\_makefile\_dir)/Makefile @exit 1 debug: @: # Do not re-make. .PHONY: success success: @\$(MAKE) -f \$(my\_makefile\_dir)/Makefile success: @: # Do not re-make. And then, when I run "make all" it just hangs, while the job fails with exit code 1. Any idea how to fix this? A: You need this \$(STATUS) : \$(all) @- echo \$(STATUS) @- \$(MAKE) @- \$(my\_makefile\_dir)/Makefile @- \$(MAKE) -f \$(my\_makefile
