The Physics of Design: The Literature on Product Design and Manufacture Nityanand, M. Salesman, D. Blomstrand Book Description Bringing together the results of more than 130 years of design research for critical design and operations, the Physics of Design celebrates the contributions of scientists to the field through a series of design analogies ranging from the motion of the tides, through the atomic processes of the sun, to ideas from the new wave of design. The series draws on the unique insights of an assemblage of prominent thinkers and scholars - each with a scientific background - to offer a window into design and manufacture, from the theory of design through to execution and operation. Showcasing a range of widely published research of both practical and theoretical nature, the Physics of Design brings together all of the pivotal work that has informed and shaped the academic discipline of design. Each chapter offers the reader a series of case studies, focusing on analogies between various scientific disciplines and design, providing a theoretical and applied depth to the topic at hand. Through a series of models and examples, the authors explore the relationships between design and physics, distinguishing between new themes in design research, and offering a range of
