Designed and developed by a team at SolidWorks, Inc., AutoCAD was originally marketed to small manufacturers and contractors who used computer-aided drafting and design to create various products. In 1989, Autodesk bought the SolidWorks technology and software, and AutoCAD became a fully integrated application, with many of the features of SolidWorks. The AutoCAD feature set continues to expand with new modules, features, and capabilities. Autodesk has also diversified the application into AutoCAD Architecture, AutoCAD LT, AutoCAD Map 3D, AutoCAD 360, and AutoCAD 360 Design. A free trial version of AutoCAD is available that is compatible with a Windows 7 or later, macOS Catalina, or Linux release. This article covers the basic features of AutoCAD, and provides guidance on how to set up and use AutoCAD for the first time. Overview of AutoCAD When you start AutoCAD, a startup screen appears. The Startup screen contains AutoCAD information and information about the last settings that were used. You can set the start-up options, such as turning on object snap and automatic line cuts. The screen also contains the names of the programs and features that have been used with AutoCAD the last time that you used the application. To access the Startup screen, choose Start⇒Autodesk⇒AutoCAD or press Ctrl+Tab. Some of the Startup screen information appears after you run AutoCAD for the first time. To change information in the Startup screen, you must change the settings that are stored in the Application and Settings registry. You must be a member of the Registry Owners group in the Users and Groups section of Control Panel. Choose Start⇒All Programs⇒Accessories⇒System Tools⇒Registry Editor to access the registry editor. On the Startup screen, you also can set how AutoCAD uses the System Clock (choose either Auto or Manual) and set whether objects snap to points or dimensions. Choosing Auto from the System Clock screen is the default setting. You can set a different startup path for the programs and features that have been used with AutoCAD. Autodesk recommends that you set the Startup screen settings to allow the AutoCAD program to use only as much hard disk space as it needs. You can find more information about using Startup
