Beyoncé made a surprise appearance as she performed her hit Lemonade for the first time live in Brisbane. "You and me, we're on a vacation," the singer began, before teasing: "I just got a message that we're on our way."

After performing two other songs – One More Time and Own The Podium – the pop superstar took the stage to join her dancers and deliver a second performance of Love Galore, which was featured on her acclaimed album of the same name. Upon resuming her performance, Beyoncé revealed the surprise guests onstage: Kelly Rowland and Michelle Williams. Lemonade is viewed as the first pop album in recent history to address female sexuality, racial inequality, police brutality, and sexual assault. In advance of the album's release,

Beyoncé announced she was taking a break from music and posting pictures on social media of the day-to-day life of herself and her daughter, Blue Ivy. "I can't believe how privileged I am to live this life," she wrote

We read about it in news stories, we heard it from the companies we talked to, and we really knew it was coming. Although we have been preparing, we still aren't quite ready for it to arrive in the form of a giant metal robot clad in limbless body armor and armed with a briefcase full of cash. In 2015, the world of gadgets got a lot sexier. Electronics became a whole lot more human, and not just in the way that Barbie, clothed in the gold of plenty, can

become. This year, we saw giants like Apple and Google enter the robot fray, joining the likes of robotics giants like Boston Dynamics and Astro Teller's Schaft, as well as startups including Aldebaran Robotics and Rethink Robotics. Last year, I wrote about futurist Dr. Nicholas "Nick" Sarracino's talk about advanced humanoid robots and how the use of robotics in manufacturing was just around the corner. You can read his history of robotics, in which he sees humans finally merging with machines, in full here. This year,

Sarracino, along with technology critic and futurist Jaron Lanier, wrote a book, "Who Controls the Robots?" (Amazon) for those who would like to know more about our latest technological transformation. [embedded content] The book focuses on the intelligence and interactivity of robots, and how the computer-generated humans who receive our data-streamed services (Facebook, Netflix) will increasingly be relegated to the background, aside from their human-created entertainment products. Sarracino and Lanier cover the history of

robotics, and how many of today's robotic inventions have evolved from technologies created more than 50 years
