Portable Timekeeper provides user with a simple to use time tracking solution. Nagios Service Monitor Nagios Service Monitor Wikipedia article. Nagios is an open-source computer system monitoring software. It can be used for network monitoring, process monitoring, and service monitoring. The name derives from the fact that the software monitors the status of a host. The software can be used to monitor file system and directory integrity, process failure, system load, response time, and operating system. The package is mainly written in Perl and is often packaged as a version of Perl. The package was originally written by Greg Papadopoulos and the Debian packager Arturas Krišto. Nagios is packaged for all major Linux distributions and is licensed under the GNU General Public License. Source code is in the public domain. Nagios Service Monitor features. Overview: Display status of every monitored service, host, and object. Graphical Representation: Graphical display of status data. Status: Display status of a service, host, or object. Checks: Automated task to check status of a specific service, host, or object. Intervals: Control how often a service, host, or object is automatically checked for specific status changes. Holes: Notifications of failure or intermittent service availability. Alarms: Maintain status of a service, host, or object and generate an alarm when status changes, falls below a specific threshold, or rises above a specific threshold.
