Changes - Default skin on new messages, updates of admin panel, updating available skins. Fixes - Configuration bug when no server is used. changelog: Version 1.3.2 Updated admin panel To install the plugin just click "Go To Plugin Directory" in the main menu and download the AIMutation.plugin file. Once you've installed the plugin click on the AIMutation button in the main menu. The plugin will work on Windows 2000 or above. AIMutation 1.3.1 Description: Update for new message color. changelog: Version 1.3.1 New feature: allows you to change the color of the new message text by clicking on the "Color My New Message" button. This new feature shows the last selected new message color when you have pressed the "Change Color" button, making it easy to change the new message color that has been changed. Version 1.3.0 Changes - Default skin on new messages for Windows 8.1 and above. Fixes - Bug with "Change Color" button. 1. Technical Field The present disclosure relates to a flapping wing fan and a fan device using the same, particularly to a flapping wing fan in which blades provided on the wings of a fan are slanted so that air is forced in different angles to generate more thrust. 2. Description of Related Art A conventional bladed fan is usually formed by a motor, a base and a housing. The motor is arranged on the base. The base is locked to the housing, and the motor and the housing are closed to form a space defined by the base and the housing. In the space, the motor can rotatably drive the blades. The conventional bladed fan is used as a cooling fan in an electronic apparatus. During use, the conventional bladed fan is arranged above an electronic element on a heat-generating device. The conventional bladed fan is placed close to the electronic element, so that the heat can be radiated and removed more effectively through the conventional bladed fan. The conventional bladed fan can be replaced by another fan to meet different demands, but the position and the mounting manner of the bladed fan have to be changed. * Adds Buddy List Buttons on all Chat/IM windows * Adds a lot of options to change other visual aspects of AIM such as Background, Tooltip and Item Text. * Supports Windows 2000 and XP * With a single click you can easily change skins and log on/off instantly You can download AIMutation from the link below. How to make a generic paged query? I'm trying to generate paged query with a generic method. For example, I have some employees table and I want to get a list of employee's names with next and previous buttons. Currently my code is: public IEnumerable PagedQuery(int pageIndex, int pageSize) { var employees = GetEmployees(); var results = from e in employees orderby e.Name select new { e.Name, e.Department }; return results.Skip(pageIndex * pageSize).Take(pageSize); } Now the problem is that this method will generate a paged query only for Employee objects. If I have objects of other classes as well (for example, for Person) then that code can generate a paged query for Persons too. But that's not what I want. Of course I can wrap the code inside a generic method but then I don't have a way to specify the type of object that needs to be paged. And this is the main point. I just want to specify the type at the beginning of my query and then generate query for this specific type only. There is a way to do it with reflection? Or is there any other way to do it? A: You can use reflection. Simply get the type of the property you're interested in, i.e. "Name" and the type you're searching for and then get the properties of that type. You'll probably need a bunch of ifs and an index/offset as there will be multiple properties of any given type: public IEnumerable PagedQuery(int pageIndex, int pageSize) { var employees = GetEmployees

What's New in the AIMutation 1.3.2?

AIMutation is a free and open source plugin for AIM™ 3.0 and AIM 3.5 by User:Jrigger. One can change the default visual style of AIM by using his/her own desired skins or themes. AIMutation can be easily added to the main menu bar, where you can access all its options and visual features. You can change the default AIM skin by using the preset skins provided or create your own skin with the help of some of its options. AIMutation can be customized in many different ways, by enabling/disabling the visual components such as item icons, buddy list buttons, window buttons, etc. Many customization options are also included, such as: Buddy List Buttons Window Styles Window Appearance Background Color Buddy List Options Window Transparency General Options Logging Options Popup Options Calendar Options Features: * 100% free and open source * Works with AIM 3.0 and AIM 3.5 (32bit and 64bit) * Can be easily installed and can be added to the main menu bar * Has many customization features For those people who use AIM online messenger and want to give it a fresh new look we found the solution. AIMutation is a small plugin that enables you to change the default look and feel of AIM using custom skins. Make AIM suit your style The plugin sits comfortably in the AIM main menu from where you can easily access all its options. Changing the default skin of AIM is only a matter of taste and AIMutation offers its users various custom skins to choose from. Multiple customization options The purpose of this plugin is not only to change your AIM default skin, but it also comes with a few options that will help you tweak your messenger the way you like. With AIMutation you can easily remove those annoying advertisements from the buddy list. Removing the buddy list buttons or general buttons can also be easily done from the Options window. Keep a record of your conversations With the help of this plugin you can also customize other visual features like: background, item and tooltip text etc. For Windows 2000 or XP users AIMutation allows you to enable transparency on all your windows. Another feature that will be added to your AIM messenger is to group IM and Chat windows via tabs. This will make them more accessible and easy to use. Logging can also be enabled when using
