Focusd Listens in on the “Lead Developer” of the Hecate Project and a Geeky Community at the same time: Modular Bitcoin We are happy to introduce you our next article in Focusd’s news series that feature the greats from the projects, like Hecate, Unbound, and Gitcoin. In this series, our goal is to show how some of the most inspirational and innovative projects are built, so we can better understand how we can be part of the next big thing. Today’s article features an interesting and extremely busy person in the bitcoin space — the lead developer of Hecate. For the past two years, the lead developer of Hecate has been working on the project and has been focused on the technical details of the project. From day one, the lead developer has pushed for modularization, something very important in blockchain projects, which we will explain in a bit. With these things, he has managed to create an innovative and diverse project with a big vision. One of the most important things about Hecate, is that the project is decentralized. That means that Hecate is independent from any third-party middleman, especially a payment processor. They do not need to pay any fees to the payment processor, which is an important part of the project. Instead, they allow customers to add many different ways to pay for their projects, such as Paypal, Stripe, Dwolla, and so on. In addition to this, any developer that wants to set up a project in Hecate, does not need to go through any authorities that will take their funds. Another great part of Hecate, is that it is based on open source. That means that for any developer, it does not matter if they want to switch to another bitcoin blockchain or other smart contract platform. The developer can use the code as it is, or they can open source their project on Github. And for those that are curious about, what the project is all about, Hecate is an AI project that runs a permissioned blockchain. It’s a blockchain that is set up in a way that allows people to call AI services on top of this blockchain. Hec
