It is intended as a useful source of material for artists, game makers and sonic craftsmen. There is a dynamic structure to the volume, and I'm always happy to find good stuff to add. So far I've added particle data, the Rithmod library, and a number of audio samples, including atmospheric, drone and other organic sounds, as well as raw field recordings. This project is free to use and distribute, but I would appreciate some kind of acknowledgment for my efforts. All contributions are also welcome. If you don't want to host your own copy of the project, you can download a Windows installer from my site. This is a side project I'm not going to do any further development on in the future, but the code is pretty well set up for adding your own material. As far as I'm concerned, this is a definitive release, so I'm not looking to add new features, but if anyone is interested, feel free to jump in and get your hands dirty. If you've never played before, though, here are some things to keep in mind. The bowling balls appear on the left and right sides of the screen, and the pins are on the bottom left and right. To initiate a game of bowling, the first thing you'll need to do is click on the coin. This will create a new lane and pick a ball for you. Click the bowling ball and it will float down the lane. The pins will fall until they touch the ball, at which point the pins will disappear, and a bowl will appear at the position of the ball. You have a maximum of 20 balls, and one of them will automatically be removed from the game. You can also pick up additional balls by clicking on them. When you click on a ball, you'll see it spinning and occasionally hitting the pins on the screen. Balls can knock down four or five pins, and the game ends when the four pins on the bottom left and right are knocked down. The game goes on until you click the home button, or if you don't, it will go on until you hit the ball. You'll need to return to the bowling lane to refill your balls. So that's it. You can play the game in all three lanes, and it's pretty easy to
