.NET provides various ways to extend the applications' functionality. This is done in the form of autoCAD libraries that can be called from other.NET applications. The use of this technology is licensed under the terms of a.NET membership. The ObjectARX (Object Analysis and Reporting Toolkit) is a.NET library which provides the

ability to perform various analysis operations on documents. History Autocad 2 was first released on May 19, 1994. It was based on Delphi and has been evolving slowly since then. In addition to the C++ API, AutoCAD allows programmers to use a number of other languages. Visual LISP, AutoLISP, and Visual Basic are languages originally designed for extending AutoCAD. The.NET and ObjectARX libraries are based on ObjectARX and written in C++. There is also a scripting language called AutoLISP Script. This language is loosely based on LISP and is used to create custom macros.
