Key features In 2010, the release of AutoCAD Architecture® 2011 provided additional building and architectural modeling tools that allow architects, engineers, interior designers, and landscape architects to perform building design. AutoCAD Architecture 2011 includes tools to draw and edit architectural diagrams, including floor plans, elevations, sections, detailed drawings, and perspective drawings. AutoCAD Architecture is also available as mobile and web apps. The following AutoCAD review discusses AutoCAD 2014 software. AutoCAD software is available for use as a desktop application, mobile app, and web app. Desktop AutoCAD software allows a user to draw two-dimensional and three-dimensional objects and create geometric models. Before using

AutoCAD, users need to install AutoCAD software, configure settings, and perform an initial setup. Users can draw, edit, and print CAD drawings. When ready to begin, AutoCAD software displays a splash screen showing the “Welcome to AutoCAD®” message. The splash screen allows a user to customize settings and sign in. After the initial setup, a user performs a project initial setup. Initial Setup After the initial setup, a user is prompted to choose an installation folder, which is where the user can save drawings. A user can customize installation settings. The first three prompts for the project setup window are Personal Information, Software License Agreement, and Data Sheet. The Project Initial Setup window allows a user to choose a name for the project, enter the project name, and select an AutoCAD version. After selecting AutoCAD, the screen displays a Microsoft Windows window with the Autodesk AutoCAD logo on the left-hand side of the window. The Window size can be altered with the Grab Window button or by dragging the window's right border to resize the window. The Grab Window button can also be used to save the settings and return to the initial setup. Table 1 provides a list of all the available project setup options. Table 1. AutoCAD supports a number of scripting languages. The ability to program in a programming language is provided by Visual LISP. Visual LISP is used in the U.S. AutoCAD LT, Pro, Autocad 2010, Engineering Workbench, Draw & Design, Electrical Workbench, Civil 3D and Architecture Design software products. AutoCAD supports the following file formats: DXF (AutoCAD Drawing Exchange Format), DWG (AutoCAD Drawing), and AI (AutoCAD Architecture), as well as many others (see Appendix). Import, export, and editing functions for various file formats are provided by the software's native drawing engine, which was developed by Autodesk and originally named Freehand. Freehand is now the name of a separate project. File formats (DXF, DWG, and AI) are supported in applications such as the 2015 release of AutoCAD. Autodesk 360, Autodesk 360 Mobile, Autodesk Architectural Desktop, Autodesk Revit, Autodesk Revit Architecture,

Autodesk Design Review, AutoCAD 360 Mobile, AutoCAD 360, CADNEO 360, AR Design Studio, and A360 Desktop were all based on Freehand. 1. Field of the Invention The present invention relates to a capacitor having an MIM (Metal-Insulator-Metal) structure. 2. Description of the Related Art The use of semiconductor integrated circuits (hereinafter referred to as "ICs") is increasing in recent years, and semiconductor devices such as ICs must have increasingly high performance. Capacitors used in an IC are required to have low dielectric constants. In order to reduce the dielectric constant of a dielectric material used in an IC capacitor, a metal-insulator-metal (MIM) capacitor structure using an insulating layer made of an insulating material having a low dielectric constant between a lower electrode and an upper electrode is being developed. Since the surface area of a capacitor using the MIM structure is smaller than that of a conventional capacitor, the capacitance per unit area is increased. For example, JP-A-2006-94208 discloses a method for manufacturing an MIM capacitor which includes forming a first metal film on a substrate, forming an insulating film thereon, and removing the first metal film by etching to provide a lower electrode, and etching the insulating film on the first metal film, to provide an upper electrode. The patent literature has described a method for forming an insulating film on a first metal film. However, there is a need to increase the density of a capacitor formed on a silicon substrate. Accordingly, a gap between the electrodes must be reduced. Further, the gap must be controlled to a predetermined value in order to control the capacitance of a capacitor.

Genomic structure of rat IL-1 alpha and IL-1 beta genes and location of a region containing the major cis-acting DNA elements for transcriptional regulation of the IL-1 beta gene. The genomic sequences of the rat interleukin 1 alpha (IL-1 alpha) and IL-1 beta genes were obtained by primer extension and screening of genomic libraries, and the complete genomic structures of these genes were determined. The rat IL-1 alpha gene contains five exons and four introns with a similar structure to that of the mouse IL-1 alpha gene. The IL-1 beta gene is composed of seven exons with five introns, and its genomic structure is completely different from that of the IL-1 alpha gene. A region containing the major cis-acting DNA elements for transcriptional regulation of the IL-1 beta gene,

Migrate data between drawings or between drawing and their annotations. Generate a new drawing or annotation based on an existing one and perform a "data merge" by automatically copying values from the existing one. (video: 3:35 min.) Graphical Selection Panel: Get a quick preview of the effects of modifying a selection, and check its value for the current view, context, hidden, and active layers. (video: 1:10 min.) Trace: Superimpose an existing linetype to any path or point, even a symbol. (video: 2:15 min.) Rectangles: Fit and fill multiple rectangles at once. (video: 1:16 min.) Fill Polygons: Fill polygons by moving the cursor over the polygon's perimeter to fill it in quickly. (video: 1:30 min.) Fringe: Trace a line around a group of objects to automatically create closed spaces. (video: 1:20 min.) GeoExtents: See the total area covered by any objects, including subpaths and geometry within other objects. Find the exact centroid or area of an object, or easily change the placement of any object with the "move to object" command. (video: 2:45 min.) De-pencil: How to cleanly remove color or line from a drawing to return to the original drawing. (video: 2:45 min.) Camera: Create custom views with the camera tool. Capture an image of your drawing or the entire drawing area, and then use it to redefine your drawing's view. (video: 1:16 min.) Convert: Convert any object or group of objects to any other type of object or group of objects. (video: 1:35 min.) Object Properties: Get a quick look at the properties of any object, and change them instantly. (video: 2:25 min.) Arc: Draw perfectly circular arcs with no corners. (video: 1:30 min.) Polyline: Create smooth, arrow-shaped lines with precision for accurate and consistent drafting. (video: 1:35 min.) Freehand: Draw without a predefined shape by first drawing a dot, then any other shape in place
