You and your team mates are entering grocery store to buy foods. As soon as you push the red button you enter a battle against other players and your goal is to eliminate each other by hitting the food with your rifle. When your food will be wounded, 3 things happen: -1st change - it goes crazy and get eliminated -2nd change - it goes crazy and start to shoot at you, therefore, try to defend yourself -3rd change - it goes back to normal and wait for the next turn. It is you who will decide whether the food is going to go crazy and eliminate others or be eliminated itself and be sent to the basemart. By the way, you can take a cup out of the shelf. The goal is to eliminate each other by hitting the food with your rifle until you get number of bullets left, and if you shot too much, you will lose your turn and your food will go crazy. There are 4 types of foods: PLOT BOARD - first type of food. It is shown on the table on the bottom of the screen and you need to eliminate it by shooting. It will turn crazy and change shape before elimination. If you win, you get 3 points and go to the middle table. If you lose, you get no points. EATMEAL - second type of food. It is shown on the table on the bottom of the screen and you need to eliminate it by shooting. It will go crazy and change shape before elimination. If you win, you get 3 points and go to the middle table. If you lose, you get no points. TISSUES - third type of food. It is shown on the table on the bottom of the screen and you need to eliminate it by hitting with an iron bullet. It will turn crazy and change shape before elimination. If you win, you get 3 points and go to the middle table. If you lose, you get no points. BASEHOOKED - fourth type of food. It is shown on the table on the bottom of the screen and you need to eliminate it by hitting with an iron bullet. It will go crazy and change shape before elimination. If you win, you get 3 points and go to the middle table. If you lose, you get no points. Also there are: Shelves - 2x2 Table - Middle - Make the most out of your shelf, you can take a lot

By leemusf Watch 319 Favourites 12 Comments 1K Views I was doing some cleanup on my work computer and found this thing! It's the Escapists Steam page. Now I don't know what it's all about, but it made me think about what kind of designs we'd have in a candy shop full of escapees. IMAGE DETAILS Image size 1372x2040px 672.35 KB Show More Published : Apr 17, 2013This invention relates generally to the field of electrical switching apparatus and more specifically to a form of variable speed power arc welding machine. Welding is a well-established process for the joining of metal, or other workpieces, and is used in a wide range of applications from heavy structural welding to light-duty automotive production, shipbuilding and ship repair, and a variety of other fields. Welding machines are available in a variety of power sources and include general use and heavy duty versions. Examples of apparatus using a variety of motor driven power sources include U.S. Pat. Nos. 3,402,279 and 5,498,055. In many applications of welding, the welding process is finished on the

workpiece itself rather than by a separate apparatus. Autogenous welding is a common form of welding such that the melting and solidifying of the weld pool is initiated by a temporary application of sufficient heat to melt the metal. It is noted in U.S. Pat. No. 5,498,055 which includes a description of autogenous welding. Examples of welding apparatus which permit the welding arc to be applied to the workpiece or pieces to be welded are found in U.S. Pat. Nos. 3,899,254, 5,123,155, and 6,277,117. Some welding processes require specialized control apparatus or, alternatively, a machine in which an operator is required to continually man-handle the welding apparatus. Many welder operators would prefer to weld using the fixed speed of present welding machines which is selected for the rated speed of the welding machine itself. The operator, however, must contend with only one speed of welding and must overcome inertia and stalling resistance in the welding machine. In order to operate the machine at a fraction of the rated speed of the machine, the operator must therefore expend greater and greater effort to make a weld, and often times cannot sustain the exertion needed to obtain a satisfactory weld at the lower rate. Because of the difficulty in
