One of the most popular name in the Digital Audio Labs is Xfer RecordsÂ . A pair of software programs, Nerve and LFO Tool, make up the company's contents, and the company also has a line of hardware products, including iOS apps, VSTi plugins, and a line of USB audio interfaces. But the company has not taken its first step in the hardware business since 2010, and instead has spent most of the time on software. However, that changed in November, when the company launched the Xfer Records LM-1, a USB audio interface based on Valve's Source Engine. Based on the interface, the company also released the Xfer Records LM-2 a few weeks later. The two interfaces are reasonably priced, and while they are not the best we've seen, they certainly are a decent addition to anyone's music studio that has a C400 or similar interface.
