Photoshop Essentials for Web Designers Photoshop is a very powerful tool, but it's easy to learn. Unfortunately, the learning curve is quite steep when you just start out with it. While the basic editing tools for web design are relatively self-explanatory, there's a lot to know about color, layers, and more. While you can pick up Photoshop as a beginner, a better option is to take a day, a week, or a month to learn as much as possible. The book *_Mastering Photoshop CS5 For Web Designers*

In February 2017 I was about to book a church tour for my girl. She wanted to go somewhere in the middle east, and I was going to book a small tour just because it was the best from the price point. I called and reserved the tour. They told me that the tour was special, a custom tour of Jordan, Israel and Palestine. I asked how special it was. They said it was a private tour and they only take a few tours per day. I asked if I could cancel the tour. They told me I had to pay the cancellation fee of \$150. I told them I will pay but I can go and see the country for free at no extra cost. I decided to go to the website and it clearly said that there is no extra fee for cancelling the tour. I called her back and said I need to cancel the tour. She said ok, but I had to pay for the 10-day trip. I said I want to cancel the 10-day trip and go somewhere else. She said it was already booked. She would ask her staff and send an invoice to me and I should pay it by the due date. I got frustrated with the phone call and hung up. When I got home I realized I was doing something wrong. I called again and told them I want to cancel the tour. They told me if I want to cancel the tour I have to pay the cancellation fee of \$150. She said she will ask her manager. He said we cannot cancel the tour at no extra cost. I hung up the phone. Later I called her back and she said I could cancel the tour for \$150, I didn't get the chance to ask why they took money from me. I was too tired to talk because I went to see her sister in Miami, Florida. The reason I did not cancel it was because I hoped that I can go back to Dubai to see her sister and her mom, her mom was in Dubai for her vacation for 1 month. Later I got a phone call from her. She said she canceled the tour. I got excited and really happy. She said she was going to give me a travel voucher for \$150. I was not sure whether I should say thank you because she should have given me the voucher, and I should have said thank you because I have nothing to pay. I said I will call her back in a couple days. One week later, I called her. She said

Q: Identity of Galois groups of different polynomial extensions of a field Suppose that f and g are two irreducible polynomials of degrees α and β in a field K , respectively, and that $f(y) = y^\alpha - p(x)$, $g(y) = y^\beta - q(x)$ are their corresponding splitting fields. Why is it true that the Galois group of f over K is S_α if and only if the Galois group of g over K is S_β ? I thought of trying to prove this using the polynomial $F(x,y) = x^\alpha - y^\alpha - p(x) - q(x)$, but the situation does not seem to change. Thanks. A: In your case, the answer is actually easy, because you have defined f and g in such a nice way. You've probably already noticed this, but for the sake of completeness, let me give the proof. Suppose that the Galois group of f over K is S_α , and let E be a splitting field for f over K . Then $[E:K] = \alpha!$, so the minimal polynomial for y over K is $y^\alpha - p(x)$, by definition of f . This follows because the minimal polynomial for y over K divides f by definition, and f has a root in E by the ring theorem. By the same argument, the Galois group of g over K is S_β . Now, if the Galois group of f is S_α , then it's also the Galois group of f over E . If the Galois group of g is S_β , then it's also the Galois group of g over E . Thus, we have shown that $S_\alpha \cong S_\beta$ by transitivity. Decision-making strategies in animals with different levels
