Note that Photoshop Elements combines basic image editing, organizing, and creating with digital photography. It is primarily sold as a cheap, no-frills, all-in-one software program. Photoshop offers a number of basic manipulation features, but its real strength is its powerful image editing tools. It offers a wide array of tools, ranging from basic to advanced, that enable you to pull out a digital image's minute details. These tools allow you to perform a wide variety of custom tasks, such as filtering (illustrated in the following sections), retouching, cropping, or manipulating images with a variety of special effects. Photoshop's basic editing features Photoshop is split into several modules: the main screen, the Layers panel, and the Expert mode. The Layers panel is the main window that enables you to create and edit images by using layers. You can create and manipulate your images with layers by making adjustments to specific areas of your photo and then merging them together. In addition, you can use the toolbars in the bottom-left corner of the Photoshop screen, shown in the middle of Figure 5-2. **Figure 5-2:** Beginners can quickly edit images with the toolbars in the bottom-left corner of the window. In the following sections, I discuss the tools that make up the basic editing window in Photoshop, including the tools in the Toolbox at the bottom of the screen, and the photo-editing options available on the main screen. Toolbox You have two ways to access the Toolbox in Photoshop: Toggling the Toolbox on and off Viewing the Toolbox on the main screen In the bottom-left corner of the screen, the Toolbox includes the following tools, shown in Figure 5-3: Hand tool: Used to move and rotate elements in your image; it also serves as a shortcut to the Free Transform and Marquee tools. Eye dropper: Used to select an area of your image and grab a color from it, and to select a specific item in an image. Brush tool: Used to paint, touch, and sculpt. You can control its size, strength, and hardness. Magic wand tool: Used to select a specific area in a photo for editing purposes. Rectangle tool: Used to make selections from a photo. Polygon tool: Used to make freehand selections

No GA from the EasyList for some time? - pbj I was using EasyList and Firefox 4.0 all the time for a week (and no SP or malware). Then it began to be sometimes GA (I signed off the account for the moment). So the question: is this because of the update from FF 4.0 to 4.1 or there's some problem with the EasyList?-- -- ====== melindajb Hello, I've also had the same problem from the update, it is because there is an updated version of Easylist, I updated and now it's working, you just need to verify if this is the case for you. Relationship of Mitotic Kinase Activity with the Expression of Its Substrates and Caspases in Colorectal Cancer. Colorectal cancer (CRC) is one of the most common neoplasms worldwide, and caspases are the central regulators of apoptotic processes. The kinase activity of the proto-oncogene c-Abl is associated with colon carcinogenesis. The aim of this study was to assess the effect of the inhibition of mitotic kinases on the apoptosis of colorectal carcinoma (CRC) cells. From our previous study, the mitotic kinase inhibitor (MKI) was confirmed to specifically inhibit the c-Abl tyrosine kinase activity and resulted in apoptosis in human CRC cells. The changes in the expression of apoptotic proteins were analyzed by Western blotting and immunofluorescence staining. The apoptotic activity of MKI was further determined by examining cleaved PARP1 by Western blotting and apoptosis by flow cytometry. MKI inhibited the proliferation of the HT-29 cell line by inducing cell cycle arrest at the G2/M stage. The expression of apoptotic proteins was increased in response to the inhibition of MKI. Moreover, the c-Abl and cleaved PARP1 protein were colocalized, and the ablation of c-Abl led to decreased PARP1 cleavage and apoptosis. Our results demonstrate that the c-Abl kinase activity is associated with the apoptosis of human CRC cells and that the inhibition of c-Abl kinase increased apoptosis.The present invention relates to an information recording medium, an apparatus for recording information on an information recording medium, an apparatus for reading
