weapons, i do not see how the samurai and the ninja are at the same level. Should the usa government and the asian countries be at the same level of power in the future? Maybe after Japan gets their second bomb and asian and the western countries seek nuclear power, Japan will become the third nuclear

nation, but it will not be a power that will change the world, as the asian and west will have already achieved their nuclear weapons. The usa has still got nukes and China is not far behind, so why is Japan worried? I think that the guy on the 3rd post has a point though. As much as Japan might want to

become a great power, I think that the government is still trying to avoid war. In the north of Japan, Russia has a lot of islands and Japan wants to prevent war there. In the south of Japan, they have historical problems with China. Even if Japan becomes a great power, they will never really

make any moves to cause war. I think that the usa are going to expand to the east and that will make China more nervous and I think that China will become a bit of a nuclear power. Japan will be left in the dust, but it will still be powerful. Maybe if Japan gets invaded by the Chinese, the Japanese

will start gaining some of their military might back. But I doubt that will happen. I thought the russian read wasn't scared of an invasion, he's just waiting to get a nuke
