AutoCAD

since AutoCAD 2009 Since AutoCAD 2009, AutoCAD has used .NET scripting for developers and those customers with a Microsoft Windows operating system. The traditional User Interface and core features are still available, but the .NET scripting language enables a much wider range of powerful automation. .NET scripting allows easy programming, rich data structures and attributes, and simple access to native object instances, including AutoCAD and third-party objects. AutoCAD supports the Visual Basic .NET (VB.NET) language. VB.NET is a simplified and enhanced version of Visual Basic that enables rapid development and delivery. The .NET scripting language uses similar object models to .NET languages like C#, and enables the user to access native objects as well as third-party objects and even third-party COM libraries. VB.NET can run on Windows 7 and later or Windows Server 2008 and later. Networking Starting with AutoCAD 2009, Autodesk added a proxy-server to allow a computer to access a AutoCAD 2010 product over a network. In 2017, AutoCAD 2018 introduced a new connectivity feature called Cloud Connection, which allows users to access AutoCAD using the Internet Explorer browser, regardless of the computer's operating system. Cloud Connection also reduces the time needed to connect to the computer, as it can use WebEx to connect to the network instead of sending a LAN request. Available in AutoCAD products Autodesk's AutoCAD software consists of three major applications, AutoCAD, Civil 3D, and AutoCAD Map 3D. The product bundle is valued at around US\$16,000. AutoCAD is the 3D drafting package and software for AutoCAD is the only AutoCAD product that is in widespread use, accounting for more than 80% of sales in 2011. AutoCAD is the most expensive piece of software available today and is also the most complex in terms of its number of features. The core programming language is C++ and the large amount of code makes it possible to integrate third-party libraries. More than 60 separate Windows-based languages and extensions are supported by AutoCAD, which makes it possible to rapidly develop user-friendly applications without having to wait for Autodesk to create a library. In 2017, Autodesk added a new feature called Cloud Connection, which allows users to access AutoCAD over the Internet using the Internet Explorer browser ca3bfb1094
