The inhibitory subunit of the cyclic AMP-dependent protein kinase has been purified and characterized. The structures of the regulatory subunit and the catalytic subunit have been determined. We have shown that the catalytic subunit is activated by phosphorylation and inhibited by dephosphorylation of the regulatory subunit. Studies on the mechanisms involved in phosphorylation of the regulatory subunit of the cyclic AMP-dependent protein kinase have been initiated. We have identified the amino acid residues phosphorylated by cyclic AMP-dependent protein kinase in skeletal muscle.Q: how to update a value to list(which is inside object) in reducer I want to update the value which is inside object.
