Paracetamol may have antidepressive effects, and drugs with selective serotonin reuptake-inhibiting properties are associated with the risk of suicidal behaviour. To examine whether paracetamol exposure is associated with psychiatric in-patient suicidal behaviour, the incidence of suicidal behaviour was compared in 489 patients on a ward where a double-blind trial of paracetamol versus placebo, double-blind or open-label, was conducted over 5 years, and an end-of-study chart review was conducted. Patients were prescribed paracetamol, in either single or multiple doses of 500 mg/day, when they were also prescribed antidepressants. A total of 145 patients (30%) experienced suicidal behaviour (22 definite suicides, 23 attempted suicides and 72 episodes of self-injurious behaviour). Patients were not treated differently during the course of the study, and severity of illness, as measured by both the Brief Psychiatric Rating Scale and the Clinical Global Impression Severity of Illness scale, was similar in suicidal and non-suicidal patients at the start and end of the study. The hazard ratio for a definite or attempted suicide in paracetamol-exposed patients as compared with unexposed patients was 2.2 (95% CI 1.1-4.7, p = 0.046). Exposure to paracetamol was associated with increased risk of suicidal behaviour. However, it was difficult to distinguish between an antidepressant effect and a paracetamol effect, and the results should be interpreted cautiously, owing to the observational study design.Q: How to access text within the table of text?

Huawei Honor 6X runs Android Nougat 7.1.1 under the hood. So this device is basically a cheaper version of the Huawei P9 and also the Chinese smartphone company Huawei is known for its affordable budget-friendly phones Android Nougat 7.1.1 The Huawei Honor 6X does come with a slightly lower display resolution as compared to other flagship devices by Huawei. This device however packs a 5.5-inch HD display which has a pixel density of.. Most of the smartphones from Chinese companies have seen better days and we expect the Huawei Honor 6X to be no exception to the rule. Its release date is already delayed so probably, the Huawei Honor 6X might not see the light of day even during the. PN672608PN672608PN672608Q: getting the value of a variable's iteration name in python I have a loop like this: c = 0 for x in y: c = c+1 what I want is to be able to get the value of c, not x, as it changes. so, I thought of doing this: c = 0 for name,x in y: c = c+1 now I can get c, but not the name of the x, as I then have the name of the x: : ['x', 'x'] Is there a way to get the value of c and not the name? A: You can replace "y" with "name" in your code, then use map() (see below for ref) to call an anonymous function with x as an argument. Then, inside the function, you can access x (the loop variable) and c (the variable you are incrementing). >>> c=0 >>> for x,y in ['x', 'y']: ... c+=1 ... print(c,x) ... 0 x 1 x 2 y >>> If you want to do this in one line: >>> map(lambda x: c+=1,y.map(x)) [0, 1, 2] Or, if you want to use enumerate() instead of map(), you can do this: >>> c=0 >>> for x,y in 6d1f23a050
