Mod for Haisha 3.05 Cracked Version.[The effect of chloroquine on fluconazole
concentrations in the vitreous body and aqueous humor of patients with chronic
superficial candidiasis]. To determine the effect of chloroquine (CQ) and natrium
fluconazole (F) on fluconazole concentrations in the vitreous body and aqueous humor.
Patients with documented chronic superficial candidiasis were treated with F (150 mg,
per day, for 12 days). The drugs were applied orally and simultaneously with F or F was
given intravenously 1 h after F suspension application. Blood samples for determination
of F plasma concentrations were collected under fasting conditions. Vitreous body and
aqueous humor samples were collected 48 h after the last F application. Samples were
frozen (-20° C), subsequently extracted by liquid-liquid extraction with diethyl ether.
Analysis was performed by means of a HPLC method with double detection (UV-Vis, 280
and 340 nm). The analysis showed significant differences between the concentrations of
F in the vitreous body and aqueous humor of patients treated with F alone or in
combination with chloroquine. F concentrations in the vitreous body and aqueous humor
of patients treated with F alone and in combination with chloroquine were significantly
lower than concentrations of F in the vitreous body and aqueous humor of patients
treated with F alone.European Study Competition on Training in Guidelines and Evidence-
based Medicine - Three Years on (ESC-3) on the Use of Scientific Evidence in Child Health
