Download the ProView Runtime installer and run it. The ProView Runtime is a free library and debugging tool that enables users to gain access to the emulator from their Visual C++ development environment. Therefore, you need to choose the one that you like, whether it is the TF300F or TF300 or the firmware and operating mode. After downloading the default configuration, connect the USB cable, open the serial port, enable both the USB and serial ports as the default port and also set the serial port speed to 115200 bps. Open the serial port in the Virtual COM port provided by the driver and press the ENTER key. The default configuration has been applied. The Kiel C51 compiler is based on an entirely new operating system, tailored for handling the multiple stages of the incremental analysis process. The documentation for this version was not updated to match the new terminology used in the testing software. This publication is intended to cover the results obtained when using the version of the C51 compilers that matches the configuration used in the testing.
