it also delivers highly-individualized kawai pianos, along with a wide range of other instruments such as the mellotron, the roland mt32, and the akai mpc1000. the polyphony pocket piano provides the same 16-note multitimbrality of the ivory ii grand piano, but at a much smaller size and at a budget-friendly price. you can easily transfer your piano patches and songs into a new session with ivory ii, giving you the flexibility to perform with a real grand piano or a polyphony pocket piano when youre on the road. the download bundle comes with all of the samples in the collection to get you started.

all sounds can be auditioned and configured as often as you want. ivory grand pianos has a refreshingly straightforward interface, although the lack of a few more features is a little disappointing. yet what this product lacks in features it makes up for in authenticity and sound quality. please note that you will need to activate this version of ivory grand pianos, which is also a bit pricier than the classic ivory grand pianos. the main downside to this plugin (aside from the price) is the file size, which is not only enormous, but is even bigger than the original ivory grand pianos. in addition, a slight sluggishness was noted on first start up, and the ilok console occasionally went offline while in use. but otherwise the product is excellent, and is a must-have for piano players who want that authentic steinway sound and feel. half-peddalling is atopic that occasionally erupts in internet forums. ivory pianos support this technique, although activating it in real time requires acontinuous-control damper pedal, rather than the regular type that simply switches sustain on and off. with this controller, you can adjust the amount of after-ring on pedalled notes to anything from a short decay to aconventional full-length sustain. personally, idon't feel it's a big deal, but its presence should satisfy those who feel it's an essential performance aid.

as for the sounds that are included with the ivory grand piano, we feel that the instrument has some of the best piano sounds on the market. we have sampled the grand piano in several different ways. the first recording that we used is the original recording that was made from the original grand piano that was used for our previous instrument. we recorded this instrument at 13 dynamic levels, and we use this recording for the start-up sound, as well as for the sounds that we use at a piano concert. then we recorded the instrument at several different dynamic levels, and we used this recording for the mid-range sounds. these mid-range sounds are the ones that we use in our orchestral collection, and they are good for orchestral scoring or for solo scoring when we need to get a nice, smooth grand piano sound. we also recorded the ivory grand piano in several dynamic levels, and we used this recording for the low end of the instrument. the low end sounds are important to get the

bass parts, and we also use them for the grand piano sounds that we use in the orchestra collection. Taylor and his team at Synthogy researched the world's most celebrated pianos, captured their tone on tape and then painstakingly scanned the tapes into their computer system, resulting in the most detailed virtual piano ever created. Ivory Grand Pianos features three pianos, all of which have been rebuilt from the bottom up, and all of which are played, recorded, and sampled by the company's talented team of pianists. Each piano includes a separate sostenuto pedal, and all have velocities from 35 to 73 percent. 5ec8ef588b
