The latest update to Adobe Photoshop CS5 comes with basic fixes and enhancements. You'll find new controls for artistic non-destructive warping, as well as an enhancement to more complete Layer Management. Importantly, you'll find improved support for Mac OS X 10.6 Snow Leopard. With that said, you'll also find a lot of under-the-hood improvements, like a new "patch" feature that is designed for the fastest, most efficient application of fixes for issues that have previously been addressed in a patch. This is a great bargain, particularly for non-US users. We managed to get a great deal with the UK price of just £6.99/€7.97/A\$11.95, coming in at around \$6, \$8, A\$11 and £9, with VAT. If you've bought Photoshop CS5 outright, this upgrade should give you a good deal of appeal at around half or less of the price of the latest standalone upgrade, CS5.5. You can build a new picture with a single click almost anywhere in Photoshop, and you'll often times discover new ways to use the tools and abilities you've had your whole life. That's the key to Adobe's developer platform, which invites raw creativity rather than meticulous judgment. When I first started working at PCMag in 2008, I remember running across Adobe's photoshop demo at Computex and absolutely loved the ease with which I could import, rotate, and control the lighting control panel. Even at the time, and especially now, I'm amazed at the power that we take for granted in Photoshop. Things have gotten steadily better over the years. I can't tell you how much better. But then they always are. It's the standard evolution that I've witnessed in every platform and program. Now, I need to simply step back and step up. It's time to get back to work and focus on my goals.
