This isn't the case with Orchid. In fact, it is pretty simple and there is only one main face clock application. Now, the ability to customize the clock via theme options in a new way. With Orchid, you can not only tweak the colors of the clock but also add background images that you can use or remove. This makes the clock that much more unique. What's New in the VideoChimeraHome?

VideoChimeraHome offers a very basic way of using a webcam. It can add text and images to the image, offer a variety of options that improve the image of the webcam, track motion and add noise.

There is no shortage of options to improve the quality of the webcam and VideoChimeraHome can be an extremely useful tool to handle common issues that users might face with a webcam. The program is well designed and the interface is intuitive, so using it is a very easy task. All options are easily accessible and labeled. However, the lack of descriptions and the absence of support, as well as some strange icons and labels in the menus, make it a challenge to use. The program lacks enough information to help new users, and it's almost impossible to discover the different features it has on your own. The application also lacks a built-in help system, so a lot of information is lost. The application comes with a library of effects and capabilities that can be easily used to improve any webcam. The video and image quality are very good, but lack in many cases a built-in picture enhancer. The program offers some smart controls and effect filters, but does not have any very useful feature that cannot be achieved with dedicated webcams. There is a lot of content to enhance any webcam, but the lack of support and descriptions limit the application's use to those who are experienced with using webcams. The program does an excellent job at improving the image of a basic webcam, but the lack of support and explanations makes it very difficult to use. Most of the features rely on custom symbols that are not clear and that make it almost impossible to find specific options or features. Some features can be easy to use and to discover, while other features are so complicated that they have no explanation. There are almost no descriptions of the application, which greatly limits its use to users that are experienced with webcams. The absence of any built-in help makes the program even harder to use. While VideoChimeraHome offers a very large library of effects, there is no way of being sure that all the functions the program offers are available with any webcam.
