of. Update on the optical
birefringence of human
haemoglobin. The optical
anisotropy of haemoglobin was
investigated and found to be

due to the interaction of the protein with a bound membrane surface. The protein-induced optical birefringence (BO) was measured for human haemoglobin in conjunction with a diffusion model to construct a plot of the observed BO against the concentration of haemoglobin. A strong linear correlation between these results and those obtained by an independent spectroscopic method is reported. In a conventional radio frequency identification (RFID) system, an

RFID reader (also referred to as an interrogator) and a transponder or tag (also referred to as an RFID tag, electronic tag or ID tag) communicate with each other for exchange of information. The RFID reader emits radio frequency (RF) signals, which are received by the RFID tag. The RFID tag comprises a chip (also referred to as an integrated circuit chip (IC chip)), which includes an electronic circuit, sometimes referred to as the tag

electronics) that demodulates and decodes the received RF signals to gain access to the information exchange between the RFID reader and the RFID tag. The RFID tag also includes an antenna for transmitting the RF signals to the RFID reader. In this way, the RFID tag does not require a physical electrical connection with the RFID reader for exchange of information. An RFID tag is typically powered by an internal power source. However, there are instances in which power

harvested from the RFID tag is transmitted to the RFID reader. For example, the RFID reader may use a wireless power transmission system, wherein the RFID reader wirelessly transmits power to the RFID tag, via a wireless power transmission channel. The RFID tag can include a transmitter, which can transmit the RF signals for receiving the RF signals at the RFID reader, and a receiver, which can receive the power from the RFID reader. The receiver converts

the received power into
electrical energy for charging
the internal power source of the
RFID tag. An f988f36e3a
